PROFESSIONAL SUMMARY

Full Stack Java Developer with 2+ years of enterprise experience building scalable banking platforms, high-performance microservices, and dynamic web applications. Strong technical expertise across Java, Spring Boot, RESTful APIs, Angular, TypeScript, and relational data architecture (PostgreSQL, Oracle, MySQL). Proven track record of architecting 50+ production REST endpoints, modernizing liquidity workflows via asynchronous queue processing, delivering 100+ responsive Angular components, and enforcing rigorous code quality with 90%+ JaCoCo test coverage and Fortify/SonarQube remediation.

TECHNICAL SKILLS

Programming Languages: Java, TypeScript, JavaScript, SQL, Python

Backend & Microservices: Spring Boot, Microservices Architecture, RESTful APIs, Spring Framework, Hibernate/JPA, JDBC

Frontend Engineering: Angular, TypeScript, HTML5, CSS3, Bootstrap, Reactive & Template-Driven Forms

Databases & Storage: PostgreSQL, Oracle Database, MySQL

Testing & Code Quality: JUnit, JaCoCo (90%+ test coverage), SonarQube, Fortify SCA, Postman

Tools & Environments: Git, GitHub, Maven, Jira, IntelliJ IDEA, Spring Tool Suite (STS), VS Code

Concepts & Methodologies: Object-Oriented Programming (OOP), Design Patterns, Asynchronous Processing, Agile/Scrum, SDLC

Domain Expertise: Digital Banking (CBX), Corporate Banking, Liquidity Management Systems (LMS), Maker-Checker Workflows

PROFESSIONAL EXPERIENCE

Intellect Design Arena Ltd. — Associate Software Engineer **Aug 2024 – Present**
Enterprise Corporate Banking (CBX) *Chennai, India*

- Engineered core enterprise CBX Digital Banking modules across Accounts, Payments, Corporate Admin, Liquidity Management, Collections & Receivables, and Virtual Accounts.
- Architected and deployed 50+ production RESTful APIs and backend microservices using Java and Spring Boot, establishing input validations, role-based controls, and seamless Angular integration.
- Delivered 100+ reusable Angular UI components and dynamic reactive forms using TypeScript and Bootstrap, streamlining client-side validation logic and state transitions.
- Modernized the Liquidity Management System (LMS) by establishing asynchronous, queue-based payload processing, decoupling services and boosting transaction throughput.
- Built mission-critical operational workflows including multi-tier Maker-Checker authorization tiers, Sweep & Pool Sweep mechanisms, and automated payment batch processing.
- Authored comprehensive automated unit test suites using JUnit, consistently maintaining 90%+ JaCoCo test coverage across assigned microservices.
- Remediated 500+ functional, QA, and UAT defects across UI, microservices, and database layers during dual Oracle and PostgreSQL migrations.
- Executed code quality audits and eliminated vulnerabilities proactively using SonarQube and Fortify Static Code Analyzer (SCA).

HDLC Technologies — Intern Software Engineer **Jun 2023 – Jul 2023**

- Constructed a full-stack Basic Banking System utilizing Java, Spring Boot, MySQL, HTML5, CSS3, and JavaScript.
- Designed and integrated secure REST APIs supporting user onboarding, balance checks, fund transfers, and transactional audit trails.
- Validated full-stack execution paths across UI inputs, API contracts, ORM persistence, and ACID transactional integrity.

KEY PROJECTS & ENGAGEMENTS

Liquidity Management System (LMS) — Architecture Modernization & Migration
Role: Java Full Stack Developer | Tech Stack: Java, Spring Boot, Microservices, Angular, TypeScript, Oracle, PostgreSQL

- Spearheaded modernization of high-volume corporate liquidity workflows by replacing synchronous database operations with an asynchronous queue-based architecture.
- Configured Sweep and Pool Sweep mechanisms, enabling corporate clients to automate multi-account balance optimization across complex business structures.

- Maintained relational database compatibility across Oracle and PostgreSQL engines with zero-downtime client cutovers.
- Resolved 500+ QA and UAT issues while sustaining ≥90% JaCoCo test coverage and remediating critical Fortify SCA findings.

Digital Transaction Banking (DTB / K1 Platform)

Role: Software Engineer | Tech Stack: Java, Spring Boot, Microservices Architecture, Angular, TypeScript, PostgreSQL

- Built extensible microservices and reusable Angular UI components for a modular, configurable enterprise transaction banking platform.
- Deployed multi-tier Maker-Checker authorization pipelines backed by strict role-based access control (RBAC).
- Executed Root Cause Analysis (RCA) on defect spikes within cross-functional Scrum sprints, enhancing API response latency and reliability.

National Bank of Kuwait (NBK) — Digital Banking Platform

Role: Software Engineer | Tech Stack: Java, Spring Boot, Angular, TypeScript, Microservices, PostgreSQL, Fortify SCA

- Customized and delivered core digital banking service modules for NBK, meeting stringent regional security and compliance requirements.
- Created secure REST endpoints facilitating seamless customer account management, statement lookups, and transaction reconciliations.
- Partnered directly with international QA teams to remediate SonarQube vulnerabilities and Fortify Static Code Analyzer findings prior to sign-off.

HONORS & AWARDS

- **Spot Award (Intellect Design Arena Ltd.):** Recognized for LMS product enhancement, migration stability, and on-time release delivery.
- **University Gold Medalist:** Ranked 1st across Computer Science & Engineering Department (CGPA: 9.16/10.0).

EDUCATION

C.V. Raman Global University — **Graduated: June 2024**

Bachelor of Technology (B.Tech) — Computer Science & Engineering

CGPA: 9.16 / 10.0 (Gold Medalist Academic Excellence Award)

D.B.M.S. Kadma High School — **2020**

Higher Secondary Certificate (Class XII — Science) — *91.6%*

Kerala Public School, Mango — **2018**

Indian Certificate of Secondary Education (Class X — ICSE) — *85.8%*
